

WEBGATE.ORG

AN ADVANCED COMMUNICATIONS
PLATFORM FOR ALL WILDFIRE
FIREFIGHTING TEAMS

MONITOR AND CONTROL FIRETRUCK'S DEVICES

DataGate works with a wide choice of remote-control terminals that are linked over 3G, 4G, Iridium Satellites or Starlink. For WildFire management, DataGate can link a wide range of mobile or fixed remote sensors and controllers.

GPS data can be routed to ESRI ArcGIS maps and control desks.

Mounting a Starlink Mini-Antenna on Firetrucks or other Emergency Service Vehicles provides Mobile Repeater Hubs for the latest data transparent Repeaters and Radios.

The InHand VG710 Data Processor can control a wide range of on-board systems and sensors. It can also monitor the vehicle's CAN-bus System.

For IOT and LorA GPS tracking and Data Processing hardware Datalink recommends InHand, Wilus and MEITRACK products.

SOSalert

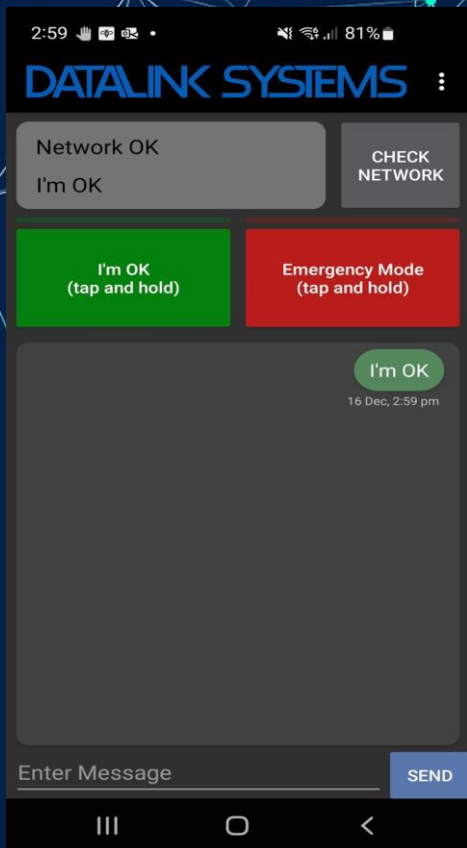

SOS alert originally developed for the U.K. MoD MI6 by Datalink Systems LLC, is now available to all EMS and SAR Teams involved in fighting Wildfires.

When activated in an emergency over Cellular or LMR (SOS button), or when linked to a Garmin In-Reach for operation over Iridium Satellites in remote regions, an alert is transmitted to a DataGate where it is processed and routed to Monitoring Desks and Rescue Teams.

WebGate Links to DJI Drones over 4G

Select classes of DJI Drones offer a 4G Dongle option. This allows video transfer with GPS locations to be routed to multiple WebGate Screens anywhere.

Datalink's WebGate routing hub allows Drone Video feeds to be shared in real-time with other departments with two-way text exchanges when required.

The logo for Datalink, featuring the word "Datalink" in a bold, white, sans-serif font. To the left of the text is a stylized orange and white swoosh that curves around the letters. The background of the slide is dark blue with a network of white lines and dots, and a few small white stars.

makes it simple

WebGate is an open SaaS (Software as a Service) platform

Starlink connects LMR Portables to remote Command Centers from anywhere

Where Firefighter Teams are fighting a fire-front in remote regions with limited radio network coverage, DataGate+Starlink allows for quick deployment of LMR Repeaters in any location, merging all agencies on common screens with Starlink providing the Broadband Internet Backbone, available almost everywhere, with immediate connectivity to all Mobile Command Centers.

A Starlink Terminal and a Digital I.P. linked Repeater can be installed in multiple FireTrucks which will provide Broadband radio communications anywhere. A Starlink terminal can be considered an Internet Broadband Access Point.

DATALINK + GARMIN INREACH

Datalink Systems

Engineered Data Solutions

Garmin InReach Devices

Iridium Satellite Communications

The global-covering Iridium satellite network allows SAR and ground-based Wildfire Firefighting and SAR Teams to be GPS tracked over satellites anywhere.

WebLink can provide special airtime packages and full integration with the WebGate SaaS Platform, unlocking the full potential of Garmin InReach devices.
